

# DOING A TESLA ON WATER

Come and check out one of the first all-electric sailboats in Scandinavia. The fossil fuel engine has been ripped out and an electric pod drive installed. Now it is ready for a 2000 Nautic Mile journey in order to prove the concept.

# AKER BRYGGE, OSLO

- **Welcome** to take a close look at the electric pod drive installation.
- **Welcome** to meet the skipper and listen to the plans on how the crew will defeat 2000 Nautic Miles using only sun, wind and water.
- **Welcome** to be a witness when the shore power charger is officially sealed before the take off...
- **Welcome** and have a bite and a drink and celebrate the start of a climate statement journey for the sake of clean oceans and upcoming generations.

## JUNE 5TH. 14.00-15.00

**The project in a nutshell:** Not a single drop of fossil fuel, not one second of shore power. Only hydro, solar and wind power. Sailing on three bodies of water via seven countries. Meeting people to promote a sustainable lifestyle on water. Collecting scientific data, trawling for micro plastics and reporting surface water observations. Interviewing innovative entrepreneurs devoted to be the change. Cooking local food in sun ovens and showering social media with stories, experiences and insights. **Sailing for change. While having fun.**

## VELKOMMEN:-)
